

DEL TACCORD

*Sports and Health Centre
94 Avenue des Goumiers – 13008 Marseille*

“MSL Oilfield Services Ltd” – Water treatment

1.500 members: Training room,
gymnastics and aesthetic centre.
Swimming pool for collective
courses of aqua gym.

To solve the problems associated with rising costs, users' comfort and high rates of bacteria present in the Centre's pool, the *Deltaccord* Company installed an **MSL OFS "P"** unit distributed by G3E.

With the installation of the **MSL OFS "P"** unit, the frequency of the filters' backwashing was reduced by a factor of five and, while remaining within the framework of the legislation, the needed chlorine rate was divided by two, the bacteria were eliminated, and a better comfort to the users was provided.

The corresponding tests and the water analysis performed by the GERME laboratory permitted to verify the elimination of the bacteria even though the chlorine rate was divided by two.

Thanks to the reduction in the filters' backwashing frequency and the quantity of the chemicals used, the savings obtained by the reduced water consumption and its heating, the Return on Investment was only 11 months.
