

August 2016

To Whom It May Concern:

CH2M contract operates the Lehigh County Authority Industrial Wastewater Pretreatment Facility in Allentown, PA. We have experienced years of struvite scale in our dewatering operations after anaerobic sludge digestion.

In February 2016, we installed a *HydroFLOW* 160i water conditioning device, which is powered by Hydropath technology, to test its ability to reduce struvite scaling on our belt press drums and drainage pans.

Within 8 days we saw that the struvite has stopped accumulating and was softening up. We kept the *HydroFLOW* device energized for two months on a trial basis. We found that struvite problems can be greatly alleviated with this technology.

We encourage you to trial one for your struvite scale issues.

Sincerely,
